

## ArcelorMittal Ultragal® Z100 Zinc coatings and thin organic coating

Category : Metal , Ferrous Metal , Alloy Steel

### Material Notes:

**Applications:** With its ability to limit repeated waviness during deformation, combined with the proven qualities of Extragal®(surface quality, corrosion protection), Ultragal® is a coating specifically recommended for visible part applications in the automotive sector. With the Ultragal® production process, waviness in steel products can be controlled both before and after forming. In an optimized painting process configuration, Ultragal® lends the painted part very high-quality paint appearance (even better than a standard galvanized substrate). With waviness reduced to a very low value, Ultragal® also contributes to enhanced reproducibility of paint appearance quality.  
**Technical characteristics:**  
**Surface appearance:** The crystal structure of Ultragal® is not visible to the naked eye and the product offers optimum surface quality before and after painting. Control of the operating drive factors amplifying waviness at the secondary processing stage, in particular during drawing, further enhances paint appearance. We offer a waviness guarantee expressed as Wa 0.8 mm after drawing, which ensures product quality  
**Hardness:** Ultragal® coating is relatively ductile, which reduces the risk of coating damage in the drawing tool.
