

Colorite Polymers Self Frosting™ 9011SF Vinyl Compound

Category : Polymer , Thermoplastic , Vinyl (PVC) , PVC, Molded

Material Notes:

Description: Colorite has developed a family of vinyl compounds to satisfy the needs of those who need a smooth, low gloss, low friction surface for the products that they produce. Historically, this was accomplished by using cold die techniques that reduced production rates by as much as 20%. This method also generates substantial amounts of scrap or rejected material due to imperfect frosting. Colorite SF compounds permit the user to maintain production rates with a uniform reproducible matte finish. Colorite SF compounds are available in non-toxic grades for the food and medical industries where the need for a low surface friction tubing exists and total transparency is not necessary. Information provided by Colorite Polymers.

Physical Properties	Metric	English	Comments
Specific Gravity	1.27 g/cc	1.27 g/cc	

Mechanical Properties	Metric	English	Comments
Hardness, Shore A	90	90	
Tensile Strength, Ultimate	20.7 MPa	3000 psi	
Elongation at Break	300 %	300 %	
100% Modulus	0.0152 GPa	2.20 ksi	

Thermal Properties	Metric	English	Comments
Brittleness Temperature	-20.0 °C	-4.00 °F
