

## DayGlo Phantom IPO-13 Invisible Pigment, Red

Category : Other Engineering Material , Additive/Filler for Polymer , Polymer

### Material Notes:

These materials have a yellowish or white color body under visible light and produce a bright vibrant color when exposed to an Ultra-Violet light source. Phantom pigments can be used for security and tracing functions where a non-visible color is warranted. Applications: General Applications: Phantom pigments are available in five basic colors and can be used in a wide range of applications such as rotogravure and intaglio printing, plastics and coatings to name a few. These materials have excellent temperature stability and solvent resistance. Phantom pigments can be also mixed with each other to create additional color phenomenon. Plastic Applications: Phantom pigments have excellent heat stability. They can withstand temperatures above 550°F making them excellent candidates for use in plastic resins. Graphic Arts and Coatings Applications: Because of Phantom pigments excellent solvent resistance, they can be used in a number of inks and coatings. An initial pigment concentration of 5% to 10% is recommended but may need to go up to 25% based on film thickness.

Physical Properties	Metric	English	Comments
Specific Gravity	5.20 g/cc	5.20 g/cc	
Particle Size	6.0 µm	6.0 µm	

Descriptive Properties	Value	Comments
Body Color	Slight Yellow Tint	
Emission Color	Red	
Emission Wavelength (nm)	620	
Excitation Wavelength (nm)	365
