

ExxonMobil Mobilarma 245

Category : Fluid , Lubricant

Material Notes:

Mobilarma 200 Series products are premium quality rust preventive materials designed to protect metal surfaces from rust and corrosion. They are formulated using light-bodied petroleum solvents with polar rust preventive, water displacement and fingerprint neutralising additives. These rust preventives are easy to apply and easy to remove making their application less man-power intensive. Mobilarma 245 is suited for the thin-film protection of finely finished parts between machining operations, including operations where water-soluble cutting and grinding fluids have been used. It is also suitable for use just before parts are packaged for storage or shipment, or to "dry" parts as a temporary protection until a heavier rust preventive can be applied. Mobilarma 247 is the heavier duty rust preventive designed to provide long term protection under more adverse conditions. Protection of equipment during storage or while temporarily out of service; Coating of equipment in preparation for shipment
