

ExxonMobil Socony Oven Conveyor Lubricant

Category : Fluid , Lubricant

Material Notes:

Socony Oven Conveyor Lubricant is a high performance product designed specifically for the lubrication of oven conveyor chains at temperatures up to 200 degrees celsius. It is formulated from a low viscosity oil and colloidal graphite. The oil acts as a carrier for the graphite and can penetrate between the moving parts. The oil is sufficiently volatile at the working temperature to evaporate without leaving residues that might cause sticking. Socony Oven Conveyor Lubricant is best applied at a low temperature point to allow the fluid to penetrate between the links and pins. As the conveyor moves into a hot zone the carrier evaporates, leaving a lubricating film of graphite.

The lubricant may be applied manually by brush or some form of centralised mechanical system. Socony Oven Conveyor Lubricant is an extra high performance product designed specifically for the lubrication of oven conveyor chains at temperatures up to 200°C. Specific applications include: Fibre glass insulation manufacture; Particleboard, plastics and textiles manufacture
