

ExxonMobil Vistalon™ 2502 Ethylene Propylene Diene Terpolymer Rubber

Category : Polymer , Thermoset , Rubber or Thermoset Elastomer (TSE)

Material Notes:

Vistalon 2502 EPDM rubber is a low mooney polymer with low ethylene and medium diene content. It has broad molecular weight distribution for excellent compounding processibility, even without the addition of a plasticizer. It is applicable for brake parts, precision seals, gaskets, molded foam sheets, electrical connectors, hose mandrels and other molded articles. It may also be used as a polymeric plasticizer in blends with other high viscosity polymers. Key Features: Excellent processibility resulting in shorter mixing and molding times. Good low temperature properties. Good low temperature flexibility and compression set. Fast cure rate and high cure state. Availability: Africa & Middle East, Europe, North America, Asia Pacific, Latin America and South America. Information provided by ExxonMobil Chemical

Physical Properties	Metric	English	Comments
Mooney Viscosity	26	26	ML 1 + 4, Radial cavity dies, polymer remassed at 145±10°C.; ASTM D1646
	@Temperature 125 °C	@Temperature 257 °F	

Descriptive Properties	Value	Comments
ENB Content	4.2%	ASTM D6047
Ethylene Content	49%	ASTM D3900
