

## Freudenberg Simrit Simriz<sup>®</sup> 486 Universal FFKT Perfluoroelastomer Compound

Category : Polymer , Thermoset , Fluoropolymer, TS , Thermoset Fluoroelastomer , Rubber or Thermoset Elastomer (TSE)

### Material Notes:

Perfluoro elastomers " or FFKM for short " have an ideal combination of characteristics, with their excellent chemical resistance, high level of temperature resistance, and high levels of elasticity. Simriz<sup>®</sup> perfluoro elastomers close the material gap between inelastic PTFE and elastomers, which have poor temperature and chemical resistance properties. With a fluoridation level of 72%, FFKM elastomers have a level of resistance close to that of pure PTFE at 76%. At the same time, FFKM materials are so elastic that they are excellently suited to both static and dynamic seals. Simrit offers ISC O-Rings which are specifically optimised with respect to flexibility at low temperatures, resistance to high temperatures, hardness, tensile strength, elongation, compression set, or color. Information provided by Freudenburg-NOK.

Mechanical Properties	Metric	English	Comments
Hardness, Shore A	75	75	
Tensile Strength, Ultimate	18.0 MPa	2610 psi	
Elongation at Break	190 %	190 %	
Compression Set	25 % @Temperature 200 Â°C	25 % @Temperature 392 Â°F	70 hr

Thermal Properties	Metric	English	Comments
Maximum Service Temperature, Air	260 Â°C	500 Â°F	
Minimum Service Temperature, Air	-15.0 Â°C	5.00 Â°F	

Descriptive Properties	Value	Comments
Color	White	
Water Resistance	5.9	70 h; 200Â°C
