

Henkel Fixodine Z Surface Conditioner

Category : Fluid , Solvent

Material Notes:

Fixodine Z is especially formulated to prepare iron, steel, aluminum, zinc and zinc-alloy surfaces for subsequent crystalline phosphate coating applications. These surfaces may be treated singly or in mixed production by either spray or immersion processing. The titanium-containing conditioning chemical promotes the formation of a dense, fine-grained phosphate coating, which is preferred as a paint base because it promotes superior adhesion and durability in corrosive environments. Application: Zinc Phosphate Conversion Coating
