

Hexcel® HexWeb® HDC-G-327 - 3/16 - 15.0 (R2) Heavy Density Core

Category : Other Engineering Material , Composite Core Material , Composite Fibers

Material Notes:

Designation: Material-Cell Size (inches)-DensityHexWeb® HDC is a fabric reinforced honeycomb, typically made from either fiberglass or carbon prepreg. A thermosetting node adhesive is used with either a thermoplastic or thermoset resin for the web impregnations. The product was developed for use in temperatures up to 500°F. Depending on the constituent resin system, the product may be suitable for short exposures at higher temperatures. Features: High compression strength non-metallic honeycomb available; Formability tailored to customer's needs; Low-moisture pickup; High thermal stability, very low coefficient of thermal expansion; Proven history in service; High corrosion resistance. Applications: HexWeb® HDC is used in sandwich structure as a replacement for potting compound in hard points or where extremely high compressive or shear strength is required. Using HexWeb® HDC in lieu of potting compound reduces process steps, improves part quality and reduces weight in the overall structure.

Physical Properties	Metric	English	Comments
Density	0.240 g/cc	0.00868 lb/in ³	

Mechanical Properties	Metric	English	Comments
Compressive Yield Strength	22.1 MPa	3200 psi	Stabilized
Shear Strength	8.27 MPa	1200 psi	Long Beam Shear, W Direction
	12.4 MPa	1800 psi	Long Beam Shear, L Direction
