

## Kazanorgsintez Aluminum Hydroxychloride

Category : Ceramic , Halide

### Material Notes:

Production Method: Aluminum Hydroxychloride is a waste product of the process of benzene alkylation with olefin, obtained through washing out the reaction mass from complex catalyst with chloride aluminum solutions. Applications: Intended for use as a coagulant in the process of industrial wastewater purification and also as an agent for carbon deposits. Information Provided by Kazanorgsintez

Physical Properties	Metric	English	Comments
pH	0.80 - 2.0	0.80 - 2.0	Activity index of hydrogen ions

Descriptive Properties	Value	Comments
Appearance	Slightly yellow or gray color liquid with green tone	
Mass concentration of basic material converted into AlCl <sub>3</sub> (g/dm <sup>3</sup> )	200-300	
Mass concentration of suspended particles (g/dm <sup>3</sup> )	0.5
