

## Meehanite Almanite<sup>®</sup> W2 Wear and Abrasion Resisting Cast Iron

Category : Metal , Ferrous Metal , Austenitic , Cast Iron , White Cast Iron , Martensitic

### Material Notes:

Type W2 is an austenitic-martensitic white iron characterized by high hardness and relatively good impact strength. Type W2 has a martensitic matrix. General Meehanite information - Meehanite metal is first melted to a definite degree of undercooling or constitution which is related to the section of the casting to be poured and the range of physical properties such as tensile strength and hardness required. Nucleation with patented mixtures of graphitizing agents results in the removal of undercooling, in the controlled precipitation of graphite and in a fine grained eutectic cell structure which determines the density and physical integrity of the casting. Ordinary cast irons made to chemical specifications which do not include the benefit of controlled undercooling are influenced by mass effect to a maximum degree and for this and other reasons cannot be considered an equivalent to Meehanite metal. Information provided by Meehanite Marketing Association.

Mechanical Properties	Metric	English	Comments
Hardness, Brinell	500 - 600	500 - 600	Nominal
Tensile Strength, Ultimate	345 - 414 MPa	50000 - 60000 psi	
Modulus of Elasticity	179 GPa	26000 ksi	
Izod Impact Unnotched	54.2 - 81.3 J @Diameter 30.5 mm	40.0 - 60.0 ft-lb @Diameter 1.20 in	bar
