

Minelco FordaDol Dolomite

Category : Ceramic

Material Notes:

Dolomite is a magnesium calcium carbonate. The mineralogical nature of Fordadol coupled with a granular particle shape and carefully controlled granule size distribution make it an ideal filler for a variety of applications. The major advantages of Fordadol are consistent granule size, excellent color consistency, high brightness, excellent wear resistance, good temperature and weather stability.. Applications: Z grades are ideal for use in paint and plaster formulations to achieve precise texture. The high degree of whiteness achieved with dolomites also makes it suitable as an aggregate in a number of ceramic and flooring applications where products of Greek and Spanish origin are offered/
