

Nanocyl NANOCYL™ NC1000 Single-Wall Isolated and Bundled Carbon Nanotubes - Research grade

Category : Carbon

Material Notes:

NANOCYL™ NC1000 series single-wall carbon nanotubes are produced via the catalytic carbon vapor deposition (CCVD) process. Nanotubes which exit the reactor are then purified to greater than 70% carbon to produce the 1100 grade. This grade is then functionalized with COOH to produce the 1101 grade. These products are available in 1 to 10 gram order quantities. A primary interest is in applications requiring high specific surface area (BET >1000 m²/g).
