

Polimeri Europa Dutral® CO 043 Ethylene - Propylene

Category : Polymer , Thermoset , Rubber or Thermoset Elastomer (TSE)

Material Notes:

Dutral® CO 043 is an Ethylene - Propylene polymer produced by suspension polymerization using a Ziegler-Natta Catalyst. A non-staining antioxidant is added during the production process. Key Features: Dutral® elastomers are characterized by excellent resistance to ageing and weathering, good resistance to both high and low temperatures, low permanent set values, good resistance to a large number of chemicals. Dutral® CO 043 is an amorphous, low molecular weight copolymer. It may be used in applications that require superior low temperature behavior. Main Applications: Automotive, cables, appliances, polymer modification, oil viscosity modifier, bitumen modification. Information provided by Polimeri Europa.
