

## Potters Industries Q-Cel® 7036 Hollow Engineered Glass Microspheres

Category: Ceramic, Glass, Other Engineering Material, Additive/Filler for Polymer

## **Material Notes:**

Q-CEL® hollow glass microspheres are alternatives to conventional fillers and additives such as silicas, calcium carbonates, talc, clay, etc.

A variety of particle sizes, densities and strengths meet specific functional and end-use application requirements such as reducing density or cost, or improving stiffness or workability. They are compatible with polyesters, epoxies, phenolic resins, urethanes, plastisols, thermoplastics, latex, concrete and other building materials, as well as emulsion- and water-gel explosives. They are available uncoated, or coated with specially-formulated coupling agents (CP01, CP03) to maximize interfacial bonding between the microspheres and the resin matrix. Information provided by Potters Industries.

Physical Properties	Metric	English	Comments
Bulk Density	0.210 g/cc	0.00758 lb/in³	
Density	0.360 g/cc	0.0130 lb/in <sup>3</sup>	Effective Density as measured by liquid displacement
Particle Size	63 µm	63 µm	Mean
	5.0 - 125 μm	5.0 - 125 μm	

Mechanical Properties	Metric	English	Comments
Compressive Strength	<= 6.89 MPa	<= 1000 psi	Isostatic working pressure
