

Shinil Chemical SHINCON ABS Electro Conductive Polymer

Category : Polymer , Thermoplastic , ABS Polymer

Material Notes:

SHINCON is the product line of SHINIL's electrically conductive compound which is able to dissipate the electrostatic charge (ESD) effectively. Shinil has developed SHINCON products using Shinil's patented conductive filler dispersion technology with variety of engineering polymers and their alloys to impart permanent static dissipative to electrically conductive property to thermoplastics. SHINCON contains multiwall carbon nanotube (MWCNT), carbon black (CB), and carbon fiber (CF) as a conductive filler. SHINCON are used in injection molding, film or sheet extrusion for the applications where the desired level of conductivity and unique mechanical property are important. A wide range of the surface resistivity is obtained by SHINCON formulations for the parts and devices depending upon customer needs and applications.
