

Silberline ET 2271 Metallescent

Category : Other Engineering Material , Additive/Filler for Polymer

Material Notes:

Metallescent pigments for plastics are designed to produce a soft diffuse appearance similar to the effect obtained by pearlescent mica pigments. Metallescent pigments produce their effect at very low loading levels and are therefore cost effective. The metallescent effect is best achieved by combining the metallescent pigment with transparent pigments or dyes. Applications: Plastics
