

## Silberline Lansford 243 Standard Series

Category : Other Engineering Material , Additive/Filler for Polymer

### Material Notes:

Lansford 243 - is a fine, non-leafing aluminum pigment with good opacity for solvent based industrial coatings. This is a very economical grade with cornflake geometry and wide particle size distribution range. This grade is not recommended for use with chromatic pigments and is typically used to create a muted masstone appearance with good opacity and cost. Applications: General Industrial

Physical Properties	Metric	English	Comments
Specific Gravity	1.47 g/cc	1.47 g/cc	
Bulk Factor	0.081	0.081	
Volatiles	35 %	35 %	
Particle Size	14 Åµm	14 Åµm	
Particle Mesh Size	<= 325 Mesh	<= 325 Mesh	1% retained

Descriptive Properties	Value	Comments
Solvents	Mineral Spirits/High Aromatic
