

## Silberline SparkleBrite®,ç Premier 2052NL-PA

Category : Other Engineering Material , Additive/Filler for Polymer

### Material Notes:

SparkleBrite®,ç Premier pigments are non-leafing aluminum pigment pastes carried in isopropyl alcohol. These grades are based on lenticular flake geometry and offer enhanced metallic effects in solvent and waterborne flexographic and gravure inks. The lenticular flake geometry produces strong, highly brilliant and very clean metallic effects. Although SparkleBrite®,ç Premier pigments can be used in aqueous inks they are not treated to protect against the aluminum-water reaction and special care must be taken to evaluate the gassing stability of each grade in the final ink formulation. High or excessive shear during ink production can initiate the aluminum-water reaction. Care must be taken to avoid excessive or high shear during processing when used in ink formulations containing water. Applications:

Printing Inks

Physical Properties	Metric	English	Comments
Specific Gravity	1.46 g/cc	1.46 g/cc	
Volatiles	35 %	35 %	
Particle Size	17 Åµm	17 Åµm	

Descriptive Properties	Value	Comments
Category	Non-leafing	
Solvents	Isopropyl Alcohol
