

TSE Industries Thanecure® ZM Activator/Accelerator for Sulfur Curable Polyurethane Rubber

Category : Other Engineering Material , Additive/Filler for Polymer

Material Notes:

Thanecure ZM is a cure activator for sulfur cured polyurethane rubber. It consists of a partial complex of zinc chloride and MBTS. Increasing the amount of Thanecure increases the rate and state of cure and improves the compression set resistance. For the most practical applications, 1.0 part of Thanecure ZM provides a good balance between cure rate and processing safety. As the concentration of Thanecure ZM increases above 1.0 part, cure rate improves only slightly with reduced processing safety. All information provided by TSE Industries
